DISCUSSION

Buhrmann et al.'193, according to the Chinese Office Action in applicant's patent priority application Serial No. 01117073.5, discloses that a telephone system includes at least one mobile station for communicating with a wireless cellular phone network at a private base station that registers a mobile station and enables communication of a mobile station with a land-line telephone network through the private base station. The private base station is responsive to pre-determined signaling codes received from a registered mobile station for switching the communication of the private base station into the wireless cellular phone network. The private base station includes a memory for storing calling numbers received from a landline network. A dialer generates calls to a stored calling number through the wireless cellular network upon receipt of a pre-determined signal generated by a registered mobile station.

Toi'778, according to the Chinese Office Action in applicant's patent priority application Serial No. 01117073.5, discloses the Time Divided Multiple Access (TDMA) for personal hand telephone system.

Pursuant to 37 CFR §1.97(d), the undersigned attorney hereby certifies that each item of information contained in this Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign patent application not more than three (3) months prior to the filing of the statement.

The citation of the foregoing references is not intended to constitute an assertion that other or more relevant art does not exist. Accordingly, the Examiner is requested to make a wide-ranging and thorough search of the relevant art.

No fee is incurred by this Statement.

Respectfully submitted,
